Comments of the employee:

- |                                     |  |
|-------------------------------------|--|
| <input checked="" type="checkbox"/> | Continuously repetition of the same gestures             |
| <input checked="" type="checkbox"/> | Work height not in accordance with work posture          |
| <input checked="" type="checkbox"/> | No comfortable standing posture                          |
| <input checked="" type="checkbox"/> | No helping devices available                             |
| <input checked="" type="checkbox"/> | Loads too heavy, carrying distance too far, too low, ... |

Comments of the employer: motivation regarding solution:

Working in position with hands above shoulder level, load of the upper limbs and lower back

**Comments of the employee:**

- “When I am picking apples from a higher level of tree I feel discomfort in upper limbs”
- “Discomfort in shoulders and lower back increases when I lift and carry heavy bucket with apples”
- “After all day work I feel strong pain in my lower back”

## MSD risks:

- |   |         |
|---|---------|
| X | Posture |
| X | Force   |

## Exposed areas:

- |   |               |
|---|---------------|
| X | Neck/shoulder |
| X | Arm/wrist     |
| X | Lower back    |

## Solutions:

Add an orchard's sledge as a supporting device for carrying a fruit bucket or box with apples. The orchard's sledge can be use as a table for fruit boxes during picking fruits from trees. Sledge helps workers to pick fruits up from higher parts of trees. It can be use as a ladder and as a table during picking fruits.

**Comments after implementing good practice solution:**

- Performing this kind of task involves high load especially in shoulder, due to carrying heavy fruit buckets/boxes
- In order to decrease shoulder load you need to reduce carrying load, which can be achieved by a orchard's sledge
- Using an orchard's sledge as a ladder allows you to reduce shoulders load and keep hands and shoulders below the shoulder-joints
